SUBJECT: AUTHORIZATION TO ADVERTISE FOR BIDS - WASTE WATER TREATMENT FACILITY & RECLAMATION SITE MONITOR WELL PROJECT

SOURCE: Engineering and Building Department

COMMENT: Plans and Project Manual have been prepared for the Waste Water Treatment Facility & Reclamation Site Monitor Well Project. The project includes construction of 13 monitor wells at the treatment plant and at the reclamation site. A map identifying the 13 monitor well locations is included herein for Council review.

In April, 2001, the California Regional Water Quality Control Board adopted an order that requires the City to monitor the effects of its effluent discharge on ground water in and around the reclamation site. Further, the order requires the City to monitor the effect on ground water due to buried sludge located at the treatment plant.

The Plans and Project Manual are available for review in the Engineering and Building Department.

The estimated probable cost for this project is $45,000. Funding for this project will come from the Waste Water Treatment Facility Capital Reserve Fund.

Recommendation: That City Council:

1. Approve the Plans and Project Manual; and
2. Authorize staff to advertise for bids on the project.
